

Easy Access to Documents in CA Clarity PPM with itd WebDAV

The itd WebDAV application is a CA Clarity PPM server module that uses the WebDAV protocol to give you access to the CA Clarity PPM document management system. It enables WebDAV clients such as Windows Explorer to access documents directly on the CA Clarity PPM document management system as well as in a local directory.

WebDAV server for CA Clarity PPM

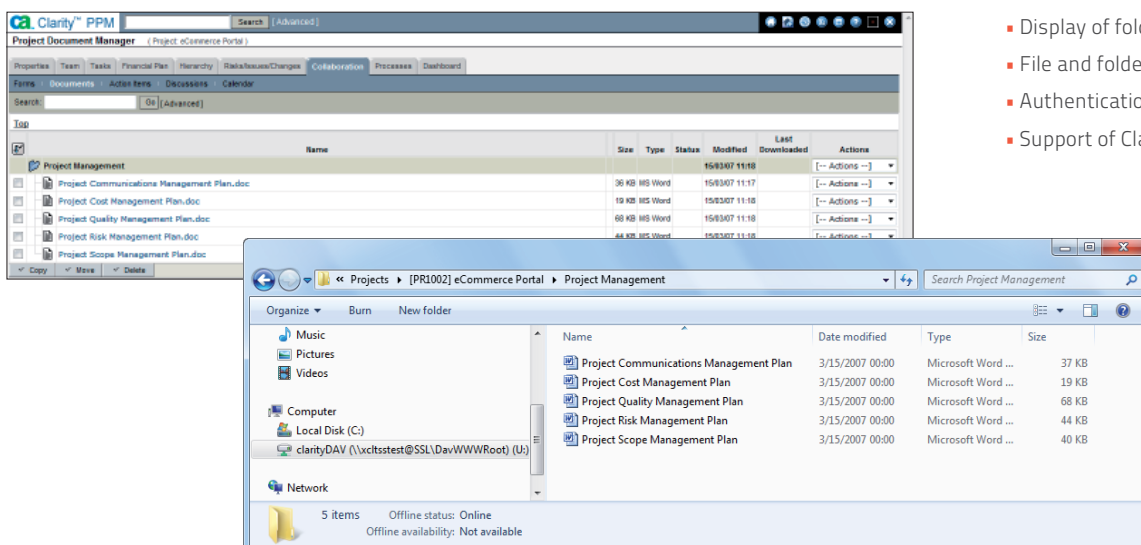

Open, edit, and copy documents

Managing documents with a WebDAV client

The itd WebDAV server module allows you to use any WebDAV-compatible client, for example Windows Explorer, to access the Clarity DMS directly using standard file and directory operations. Projects and the Clarity knowledge database are at the top of the directory structure. The document and folder structure is on the next level and mirrors the collaboration capability structure in CA Clarity PPM. The supported file and folder options are: copy, save with version numbers, delete, and enable/disable functionality. The Clarity DMS represents the "enable" and "disable" WebDAV actions as "check-in" and "check-out" operations.

Features and benefits

- Access CA Clarity PPM like a local directory from the Windows Explorer
- Works with knowledge store and all projects
- Check-in and check-out operations
- Fully supports CA Clarity security

- Display of folders and files
- File and folder operations
- Authentication linked to CA Clarity PPM
- Support of Clarity rights model

Accessing CA Clarity PPM documents using Windows Explorer

Security and document rights

Access to CA Clarity PPM is linked to the standard Clarity authentication. The itd WebDAV server module compares the log-in details entered in the WebDAV client with the user information stored on the Clarity system. Furthermore, itd WebDAV checks the rights of the active Clarity user with reference to the standard Clarity rights model each time a project, document folder, or document is accessed.
